#### **DETAILED ACTION**

## Claim Objections

Claims 1, 9 and 10 are objected to because of the following informalities: The use of "and/or" makes the claim indefinite since the slash mark means either "and" or "or".

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being unpatentable by Gunmar et al (5293640).
- 3. Regarding claim 1 Gunmar at al teaches a communication performance calculation method in a mobile communication system which includes a plurality of base stations and a plurality of mobile stations for carrying out communication with the base stations, wherein an area where the mobile stations are distributed is divided into a plurality of subdivisions, said communication performance calculation method comprising (figs. 1,2,8 abstract):

a transmission power data storing step of storing transmission power data of the base stations corresponding to the subdivisions and/or of the mobile stations visiting the subdivisions (col. 6, lines 30-45); a traffic intensity data storing step of storing traffic

Art Unit: 2686

intensity data of the subdivisions (col. 6, lines 30-45, col. 7, lines 7-25); a traffic calculating step of calculating a mean and variance of applied traffic at the base stations (col. 6, lines 58-67, col. 7, lines 7-25, col. 4, lines 25-50); and a communication performance calculating step of calculating communication performance from the mean and variance (col. 6, lines 58-67, col. 7, lines 7-25, col. 4, lines 25-50).

Regarding claim 9 Gunmar at al teaches a computer readable recording medium storing a program causing a computer to execute a communication performance calculation method in a mobile communication system which includes a plurality of base stations and a plurality of mobile stations for carrying out communication with the base stations, wherein an area where the mobile stations are distributed is divided into a plurality of subdivisions, said communication performance calculation method comprising (figs. 1,2,8): a transmission power data storing step of storing transmission power data of the base stations corresponding to the subdivisions and/or of the mobile stations visiting the subdivisions (col. 6, lines 30-45, col. 10, lines 29-41); a traffic intensity data storing step of storing traffic intensity data of the subdivisions (col. 6, lines 30-45); a traffic calculating step of calculating a mean and variance of applied traffic at the base stations; and a communication performance calculating step of calculating communication performance from the mean and variance (col. 6, lines 58-67, col. 7, lines 7-25, col. 4, lines 25-50).

Regarding claim 10 Gunmar at al teaches a communication performance calculation apparatus in a mobile communication system which includes a plurality of base stations and a plurality of mobile stations for carrying out communication with the

Art Unit: 2686

base stations, wherein an area where the mobile stations are distributed is divided into a plurality of subdivisions, said communication performance calculation apparatus comprising (figs. 1,2,8): transmission power data storing means for storing transmission power data of the base stations corresponding to the subdivisions and/or of the mobile stations visiting the subdivisions; traffic intensity data storing means for storing traffic intensity data of the subdivisions (col. 6, lines 30-45); traffic calculating means for calculating a mean and variance of applied traffic at the base stations; and communication performance calculating means for calculating communication performance from the mean and variance (col. 6, lines 58-67, col. 7, lines 7-25, col. 4, lines 25-50).

Regarding claims 2,11 Gunmar at all teaches a first calculating step of calculating, from the transmission power data of the mobile stations stored in the transmission power data storing step, received power at the base stations of signals sent from the mobile stations to the base stations; and a second calculating step of calculating, from the traffic intensity data stored in the traffic intensity data storing step and the received power, the mean and variance of the applied traffic at the base stations (Col. 6, lines 35-54).

Regarding claims 3,12 Gunmar at al teaches a third calculating step of calculating the mean and variance of the applied traffic at the base stations from the transmission power data of the base stations stored in the transmission power data storing step, and from the traffic intensity data stored in the traffic intensity data storing step (Col. 6, lines 35-67).

Art Unit: 2686

Regarding claims 4,13 Gunmar at al teaches probability calculating step of calculating probability distribution from the mean and variance of the applied traffic; and a probability decision step of calculating a probability that the applied traffic exceeds a predetermined threshold value (col. 7, lines 24-44, col. 6, lines 35-54).

Regarding claims 5,14 Gunmar at al teaches wherein said probability decision step comprises a step of setting acceptable interference power to the base stations or its constant multiple as the threshold value (col. 7, lines 25-44, see above).

Regarding claims 6,15 Gunmar at al teaches wherein said probability decision step comprises a step of setting a sum of acceptable interference power to the base stations or its constant multiple and thermal noise power of receivers in base stations as the threshold value (col. 7, lines 25-44, see above).

Regarding claims 7,16 Gunmar at al teaches a threshold value calculating step of carrying out calculation using a ratio of a sum of acceptable interference power to the base stations or its constant multiple and thermal noise power of receivers in the base stations to thermal noise power of the receivers (col. 7, lines 25-44, see above); and a step of setting a calculation result in the threshold value calculating step as the threshold value (col. 7, lines 25-44, see above).

Regarding claims 8,17 Gunmar at al teaches wherein said probability decision step comprises a step of setting a total sum of maximum transmission powers of the base stations or its constant multiple as the threshold value (col. 7, lines 24-44, col. 6, lines 35-54).

Art Unit: 2686

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KHAWAR IQBAL whose telephone number is 703-306-3015.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **BANKS-HAROLD**, **MARSHA**, can be reached at 703-305-4379.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2684 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.

Khawar Iqbal
